**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
  - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 2833

1. The disclosure is objected to because the term "bucking" as used in "bucking flange" and "bucking end" throughout the application is unknown to the examiner and has not been defined in the specification. In addition, the structure 20 described as a "mold" is more properly called a *die* or a *punch*. Appropriate corrections are required.

2. Claims 2 and 4-12 are objected to because sections "C" "D" and "E" in claims 4 and 8 should be changed to **A**, **B** and **C** since the steps "A" and "B" of claim 2 are not part of these claims. In addition, it appears that the first stamping step involves stamping the blade *with* (not through) an upper *die* (not mold). Appropriate corrections are required.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Takano. This contact structure comprises a conductive blade 5 with a non-circular fastening section 6. As seen in the figures, the fastening section has two zones (one that has vertical sides and one that has angles sides) resulting in a chamfered angle therebetween. In regard to the method of claims 2 and 4-12, it is noted that "determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process" (MPEP 2113).

Art Unit: 2833

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Broadhurst forms a contact, similar to that of the present invention, in a similar manner.
